Do you have any questions about the fabric? **We have the answers.**

Whether you select a classical or a recycled awning fabric – with a fabric from the my collections 2 fabric collection from weinor you always decide in favour of dream patterns in addition to top materials and at least 93% UV protection. But what makes a good woven fabric? How do the colours retain their brightness? What do you need to consider when cleaning it? Answers to these and other questions can be found in our mini guide. So that you can enjoy your textile sun protection for many years!

1 Harmonious or lively? Precisely your dream fabric!

The 171 patterns in the three-part my collections 2 awning fabric collection are bound to include your favourite fabric. The fabrics captivate with exciting, new weaving effects, modern colouring as well as 12 exclusive patterns. The choice is yours: our proven woven fabric or uncompromisingly good recycled material.

modern basics blue® – the first sustainable awning fabric collection with 85% recycled PET, now complete!

evermore – timeless, harmonious fabrics in beige and grey with novel patterns and structures

hi hello! – Colourful fabrics with vivid patterns and innovative web accents

Please note: Blended yarns are a combination of colour-coordinated light and darker yarns. If the individual blended yarn units are cut, depending on the pattern and course of the thread, multi-coloured fabric edges may arise. Unfortunately, this cannot be avoided and is manufacturer-dependent.

Whether single-colour, block or fantasy stripes, no matter whether you're looking for timelessly harmonious colours or creative trends – we have the right fabric for all styles and each weinor awning.

2 Light or dark? Your style is decisive.

Bright, shining colours are classics for awnings. They protect against sun radiation but still let a lot of light onto the patio. As all the weinor fabrics shield at least 93% of the UV radiation, even the lightest-coloured fabric provides reliable sun protection.

Rule of thumb: The more lively, the less sensitive

We have developed extra lively patterns with a dark background where soiling is seen less for locations close to busy roads or with several trees in the vicinity.

Here, residue from leaves, pollen, soot and bird droppings cannot be so easily seen on them and your awning remains attractive longer.

3 Recycled or classical? Always uncompromisingly good!

Polyester, or more precisely recycled top quality PET, is the perfect basic material for our sustainable fabrics. The weinor recycled modern basics blue® collection is the first sustainable fabric collection of its kind worldwide with sun protection fabric Tempotest® Starlight® blue using 85% recycled PET certified according to the Global Recycled Standard (GRS).

The recycling process by no means harms the quality, which is uncompromisingly good as for all weinor fabrics. You merely decide in favour of or against recycling – and for the pattern desired.

Whether recycled or classical – weinor awning fabrics have always been designed for a long operating life. Here, a decision in favour of first-class quality is also always a decision for more sustainability. Because, if something is still attractive and functional in all respects after many years' demanding operation, it need not be replaced and therefore goes easy on valuable resources.

4 Acrylic or polyester? A question of taste.

Whether you decide in favour of a classical acrylic polyester awning fabric from weinor or made of polyester or recycling polyester – all 3 woven fabric types provide you with the best outdoor materials available on the market.

Normally, acrylic material fibres are somewhat more fleecy, i.e. they boast attractive haptics. Generally, polyester fabrics are somewhat smoother. Blended yarns can also be used here for attractive and special fabric appearances. Simply let your taste guide you and select the weinor fabric which best matches your furnishings.

5 Material and processing? Always premium quality!

weinor uses state-of-the-art dyeing technology, high-quality equipment and top processing for high durability of the awning fabric.

Spinneret dyeing is the most extensive and highest-quality method of dyeing. In a special spinneret dyeing process, the colour pigments are already transferred to the fibres during fibre production, still before they are spun as yarn. Therefore, the dye is excellently embedded and the fabric retains its long-lasting, brilliant colour. Another advantage: Spinneret dyeing is far more environmentally friendly. Up to 90% less water is used than for other dyeing processes.

At weinor, the fibre is not only superficially dyed, but always fully imbued (like a carrot).

Special equipment ensures a long operating life for the awning fabric and lets impurities roll off in the long-term (Teflon™ for Parà and TEXgard for Sattler).

Whether sewn or glued: Awning fabrics are manufactured as narrow strips and must be joined. weinor applies the respective technique, depending upon what is advantageous for the durability of the tailored awning fabric.

6 And when it rains? It's best to retract the awning!

Modern awning fabric has water-repellent properties. The rain water runs off the awning reliably when it is tilted at 14 degrees. Persistent humidity is nonetheless not good for the fabric.

If it is retracted when wet, the woven fabric cannot dry. Discolouration occurs due to water stains and the fabric may also develop more wrinkling and honeycombing.

Moisture also favours fungal infestation, which leads to mildew stains. So: always ensure that your awning is dry!

Special equipment lets impurities roll off in the long-term.

7 How should I take care of it? **Best gently!**

Primarily, it is important that you neither rub your awning fabric nor brush it too hard. Otherwise, the high-quality coating, which ensures that the woven fabric remains attractive in the long-term, is affected.

If you own an open awning, you can retract it so far that the soiled spot can be easily accessed from beneath it on the wound up fabric. For all other awnings, it is necessary to work from above. High-pressure cleaners should never be used – they damage the fabric.

Let the foam work!

- Vacuum pollen and loose dirt with the vacuum cleaner's upholstery brush or lift it off cautiously with adhesive tape
- In case of persistent dirt, moisten the fabric with clear water to soften dried stains.
- Use lukewarm water with a maximum of 40 °C and 5 to 10 percent solution with mild detergent
- Apply the foam to the fabric with a sponge, do not rub it in!
- After an application time of 15 to 20 minutes, rinse it with ample clear water and then let the fabric dry

8 Are creases okay? **Yes, because your fabric also lives.**

Awning fabrics are high-performance products which meet stringent technical requirements. High-quality woven fabrics are used for manufacturing. Furthermore, laboratory tests guarantee the important properties such as stiffness, tear-resistance, colour fastness and much more. But the material can still change after some time, especially if the awning is used frequently. This simply cannot be ruled – even by using state-of-the-art technology.

These natural changes also include sagging of the fabric between the seams or overstretching in the region of the hem. The fabric may also exhibit creasing, rippling or honeycombing from the beginning. This is a mostly normal characteristic of awning fabrics, irrespective of the manufacturer and is not a reason for complaint or rejection.

Rippling near the seam

9 What can you trust? **Quality seals stand for quality.**

For a long operating life, all weinor fabrics have a high-quality finish, which lets impurities roll off in the long-term. Certified in accordance with OEKO-TEX Standard 100*, they neither contain substances detrimental to health nor to the environment. Moreover, weinor fabrics offer the best possible sun protection with a shield between 93.3 and 97.5 % of the UV-radiation.

Please note: For health reasons, newer awning woven fabrics to the greatest possible extent do not use stabilising formaldehyde. So don't be surprised if your new awning is not quite as "stable" as your old one. As a sign of their harmlessness, all weinor fabrics carry the OEKO-TEX seal.

10 Who helps? **Your weinor retailer provides you with competent advice.**

Awning systems are extremely complex units. Factors such as statics, electricity together with the high-quality workmanship of the fabric and frame play an important role – especially in terms of long service life. The mounting technology is also very sophisticated, depending on the base. Awnings purchased and installed by professional retailers provide security and quality. Your weinor retailer and sun protection expert will provide you professional advice and gladly help you choose the right awning and the appropriate fabric – and that with an attractive price-performance ratio.
